SUMMARY

Motivated Artificial Intelligence Engineering student at Delta University for Science and Technology with expertise in Python, Machine Learning, Full-Stack Web Development, Computer Vision, and IoT integration. Experienced in developing AI-powered applications, assistive technologies, and smart systems. Strong in problem-solving, analytical thinking, teamwork, and self-learning, with a passion for creating innovative technology solutions and contributing to AI-driven projects.

EDUCATION

Bachelor's Degree in Artificial Intelligence Engineering
Delta University for Science and Technology

Present

PROJECTS

AI, Computer Vision & Assistive Technology Projects | **Smart Glasses for the Blind**

- Developed an assistive smart glasses system utilizing computer vision and sensors to identify objects and describe the surrounding environment for visually impaired users.

Adaptive Gesture Interface

- Built an interactive desktop application for remote computer control using face tracking, eye movement detection, and hand gesture recognition.
- Successfully integrated into a professional project portfolio.

IoT & Embedded Systems Projects | **Smart Plant IoT System**

- Designed an intelligent agriculture solution for remote environmental monitoring and automated irrigation.
- Documented and presented through a visual project titled *"Smart Agriculture with a Touch of AI."*

Neck Angle Measurement Project

- Developed a healthcare-focused system using ESP32 and MPU6050 sensors to measure neck angles during physical therapy sessions.
- Enabled real-time data monitoring and analysis.

Web Development, Python Applications & Games | **Holiday Horizon Web Application**

- Developed a travel planning and booking platform with Firebase backend integration for data management and user services.

Twenty One Game

- Designed and programmed an interactive card game in Python & published and maintained on GitHub.

Arab World Map Quiz & Human Body Parts Games

- Created educational geography and anatomy games using Python libraries such as Turtle and Pandas.

ADDITIONAL PYTHON PROJECTS

- Library Management System
- Encryption & Decryption Tool
- Worker Wage Calculator
- Puzzle Island Game
- Password Generator
- Interactive Doll Game
- Currency Converter
- YouTube Channel Name Generator
- Blackjack Game
- Snake Game
- Ping Pong Game
- Turtle Race Game
- Map Selection Game

LANGUAGES

Arabic | Native Speaker

English | Good

PERSONAL SKILLS

■ Teamwork | Analytical Thinking | Adaptability

■ Self-Learning | Problem Solving | Time Management

TECHNICAL & SOFTWARE SKILLS

Programming Languages & Technologies

- Python | Java
- Full-Stack Web Development
- Machine Learning | Artificial Intelligence
- Computer Vision | IoT Integration

Development Tools & Platforms

- Git & GitHub
- PyCharm
- Visual Studio Code (VS Code)
- Firebase

Freelancing Platforms

- Upwork | Mostaqel | Khamsat

Office & Collaboration Tools

- Microsoft Office (Word, Excel, PowerPoint, Teams, Outlook) (ICDL) |
- Zoom

CAREER SKILLS

- **AI & Machine Learning:** Knowledge of developing, training, evaluating, and optimizing machine learning models for automation, prediction, and intelligent decision-making systems.
- **Python Programming:** Proficient in writing efficient, maintainable, and reusable Python code across web applications, automation systems, AI solutions, and software development projects.
- **Full-Stack Development:** Capable of developing modern web applications and integrating backend services using technologies such as Firebase.
- **IoT & Embedded Systems:** Experienced in building IoT solutions that combine sensors, microcontrollers, and software applications for real-time monitoring and automation.
- **Technical Research:** Continuously explores emerging technologies, AI frameworks, and software engineering practices to improve performance and innovation.
